

Painting by the Numbers for Truro's Modern homes

We have color charts that may be found on-line at trurohomes.org. In them we consider just two colors; the **SIDING** color for grooved wood panels, gutters, downspouts, window trim, and fascia and the **ACCENT** color for doors and plain wood panels (above and/or under windows and doors.) The wood panels should be stained while the doors may be painted.

In many of the Truro Modern homes, we need to consider the brick color as well. The committee will consider an additional color for the doors only, but will not approve white replacement windows or white window trim.

In general, siding colors are natural colors that may be found in the winter woods. They will be "greyed." That is to say that the complement (color opposite on the color wheel) will be added to the basic hue color, effectively toning it down.

The roof should be harmonious with the brick tone and siding color. Because working with color is not easy, we ask that you get approval for your choices from the ACC prior to re-staining and/or re-painting.

In this split-level model it is important to consider the brick and roof hues in deciding siding and accent colors.

The siding color you select from our charts for the textured wood panels should contrast in color and tone with the brick. The roof should blend with the brick and this siding color. Since you already have three colors (the brick, siding, and roof colors), the accent color needs to be restrained. The front door and possibly a one-car garage door could be done in the accent color. A two car garage door probably needs to be the siding color.
